Directorate of Technical Education
Gandhinagar - Gujarat

DTE's Vision:

- To facilitate quality technical and professional education having relevance for both industry and society, with moral and ethical values, giving equal opportunity and access, aiming to prepare globally competent technocrats.

DTE's Mission:

- Quality technical and professional education with continuous improvement of all the resources and personnel
- To promote conducive ecosystem for Academic, Industry, Research, Innovations and Start-ups.
- To provide affordable quality professional education with moral values, equal opportunities, accessibility and accountability
- To allocate competent and dedicated human resources and infrastructure to the institutions for providing world-class professional education to become a Global Leader ("Vishwa Guru")

Institute's Vision:

Certificate

This is to certify that Mr./Ms
Enrolment No. of 5th Semester of Diploma in Information Technology of
..... (GTU Code) has satisfactorily
completed the term work in course “AI Product Design (DIO5016021) for the academic year
..... term prescribed in GTU Curriculum.

Place:

Date:

Signature of Course Faculty

Head of the Department

Preface

Artificial Intelligence (AI) is transforming the way products and services are designed, developed, and delivered across various industries. Understanding the principles of **AI Product Design** is essential for diploma students, as it combines technology, user needs, and business strategies to create practical and innovative AI-based solutions.

This laboratory manual has been prepared according to the syllabus of the **AI Product Design** course for Diploma students. It provides a collection of practical experiments and activities that help students understand the concepts of AI product development through hands-on learning. The experiments cover topics such as problem identification, user persona creation, customer journey mapping, AI product lifecycle, Minimum Viable Product (MVP), feature prioritization, AI monetization models, Business Model Canvas, AI APIs, token concepts, and AI evaluation methods.

The primary objective of this manual is to bridge the gap between theoretical knowledge and practical implementation. By performing the experiments, students will gain experience in designing AI products, analyzing user requirements, evaluating AI solutions, and understanding industry practices. The exercises encourage creativity, critical thinking, teamwork, and problem-solving skills required for developing user-centric AI products.

This manual is intended to serve as a useful learning resource for students and a teaching aid for faculty members. It is hoped that the practical sessions will help students build a strong foundation in AI Product Design and prepare them for future academic, industrial, and entrepreneurial opportunities in the field of Artificial Intelligence.

Programme Outcomes (POs):

PO-01: Apply knowledge of mathematics, natural sciences, engineering fundamentals, and an engineering specialization (as specified in DK1 to DK4) to a wide range of practical procedures and practices

PO-02: Identify and analyze well-defined engineering problems and reach substantiated conclusions using codified methods of analysis specific to their field of activity (DK1 to DK4).

PO-03: Design solutions for well-defined technical problems and assist in the design of systems, components, or processes to meet specified needs, with appropriate consideration for public health and safety, as well as cultural, societal, and environmental factors (DK5).

PO-04: Conduct investigations of well-defined problems by locating and search relevant codes and catalogues, and by conducting standard tests and measurements (DK8).

PO-05: Apply appropriate techniques, resources, and modern computing, engineering and IT tools to well-defined engineering problems, while being aware of their limitations (DK2 and DK6).

PO-06: When solving well-defined engineering problems, evaluate sustainable development impacts to: society, the economy, sustainability, health and safety, legal frameworks, and the environment (DK1, DK5, and DK7).

PO-07: Understand and commit to professional ethics and the norms of technician practice, including compliance with relevant laws. Demonstrate an understanding of the need for diversity and inclusion (DK9).

PO-08: Function effectively as an individual, and as a member or leader in diverse and inclusive teams, in multidisciplinary face-to-face/remote/distributed settings (DK9).

PO-09: Communicate effectively and inclusively on well-defined engineering activities with the engineering community and society at large by comprehending the work of others, documenting one's own work, and giving and receiving clear instructions.

PO-10: Demonstrate awareness of engineering management principles as a member or leader of a technical team and apply them to manage projects in multidisciplinary environments.

PO-11: Recognize the need for, and have the ability for independent updating in the face of specialized technical knowledge (DK8).

Practical Outcome - Course Outcome matrix

Course Outcomes (COs): - Describe the fundamental concepts of AI products and AI models - Use design thinking principles to develop user-centric AI solutions. - Utilize concepts of AI product lifecycle, feature prioritization, and business models to outline AI product strategies. - Discuss the applications of AI in social media, content creation, and recommendation systems along with associated risks. . - Explain data privacy concepts, governance principles, and responsible AI practices. - Apply knowledge of AI threats to identify appropriate mitigation strategies in basic scenarios.							
S. No.	Practical Outcome/Title of experiment	CO1	CO2	CO3	CO4	CO5	CO6
1.	Define AI product idea, problem statement, target users, and minimum 3 core features.	✓					
2.	Draw conceptual AI system architecture showing Data, Model, Interface, and Feedback Loop.	✓					
3.	Identify and describe Data components, classify data types, and identify risks.	✓					
4.	Develop User Persona, Empathy Map, and Customer Journey Map.		✓				
5.	Design AI interaction flow and basic UI wireframe.		✓				
6.	Define Minimum Viable Product (MVP) features and prepare feature prioritization matrix.			✓			
7.	Develop Business Model Canvas and identify AI monetization strategy.			✓			
8.	Prepare AI integration plan including API usage, cost awareness, and security.			✓			
9.	Design AI-based social media campaign and generate promotional content.				✓		
10.	Develop prototype using no-code tools and prepare demo video (2–3 minutes).				✓		

11.	Draft Data Protection Plan and AI Ethical Usage Policy.					✓	
12.	Perform AI risk assessment and design mitigation strategy.						✓

Industry Relevant Skills

The following industry relevant skills are expected to be developed in the students by the performance of experiments of this course.

AI Product Design Skills: Students should develop skills in identifying real-world problems, defining AI product ideas, understanding AI models, and designing user-centric AI solutions using design thinking principles.

Technical Skills: Students should develop technical skills related to AI product development tools and platforms such as ChatGPT, Google Colab, Figma, Canva AI, no-code AI tools, and AI prototyping platforms. They should also understand AI system architecture, APIs, and AI integration concepts.

Analytical and Problem-Solving Skills: Students should learn to analyze user requirements, prepare user personas, prioritize product features, evaluate AI-generated outputs, assess risks, and make informed decisions throughout the AI product lifecycle.

Creative and Innovation Skills: Students should develop creativity in designing AI-based products, creating user interfaces, generating digital content, developing prototypes, and presenting innovative AI solutions for real-world applications.

Communication and Ethical Skills: Students should develop effective communication, presentation, documentation, and teamwork skills while preparing AI product proposals, business models, and demonstration videos. They should also understand responsible AI practices, data privacy, AI governance, and risk mitigation strategies to ensure the ethical and secure development of AI products.

Overall, the AI Product Design lab manual is designed to help students develop technical, analytical, creative, communication, and ethical skills that are highly valued in the rapidly evolving AI industry. By acquiring these competencies, students will be better prepared to design, develop, evaluate, and present AI-powered products that address user needs while following responsible AI practices.

Guidelines to Course Faculty

1. Course faculty should demonstrate experiment with all necessary implementation strategies described in the curriculum.
2. Course faculty should explain industrial relevance before starting each experiment.
3. Course faculty should involve & give opportunity to all students for hands-on experience.
4. Course faculty should ensure mentioned skills are developed in the students by asking.
5. Utilise 2 hrs of lab hours effectively and ensure completion of write up with quiz also.
6. Encourage peer to peer learning by doing the same experiment through fast learners.

Instructions for Students

1. Organize the work in the group and make a record of all observations.
2. Students shall develop maintenance skills as expected by industries.
3. Students shall attempt to develop related hand-on skills and build confidence.
4. Students shall develop the habits of evolving more ideas, innovations, skills etc.
5. Students shall refer to technical magazines and data books.
6. Students should develop the habit to submit the practical on date and time.
7. Students should prepare well while submitting a write-up of exercise.

Sr No.	Practical Outcome/ Title of Experiment	Page	Date	Marks(25)	Sign
1	Define AI product idea, problem statement, target users, and minimum 3 core features.				
2	Draw conceptual AI system architecture showing Data, Model, Interface, and Feedback Loop.				
3	Identify and describe Data components, classify data types, and identify risks.				
4	Develop User Persona, Empathy Map, and Customer Journey Map.				
5	Design AI interaction flow and basic UI wireframe.				
6	Define Minimum Viable Product (MVP) features and prepare feature prioritization matrix.				
7	Develop Business Model Canvas and identify AI monetization strategy.				
8	Prepare AI integration plan including API usage, cost awareness, and security.				
9	Design AI-based social media campaign and generate promotional content.				
10	Develop prototype using no-code tools and prepare demo video (2–3 minutes).				
11	Draft Data Protection Plan and AI Ethical Usage Policy.				
12	Perform AI risk assessment and design mitigation strategy.				

Date:

Practical No.1: Define AI product idea, problem statement, target users, and minimum 3 core features.

A. Objective:

The objective of this practical is to make students understand the process of identifying a real-world problem, defining an AI product idea, identifying target users, and specifying minimum core features for an AI-based solution.

B. Expected Program Outcomes (POs):

PO2, PO3, PO9

C. Expected Skills to be developed based on competency:

- Problem identification and analysis skill
- AI product ideation skill
- Requirement analysis skill
- Report writing and communication skill

D. Expected Course Outcomes (Cos)

CO1: Describe the fundamental concepts of AI products and AI models.

E. Practical Outcome (PRo)

Define AI product idea, problem statement, target users, and minimum three core features.

F. Expected Affective domain Outcome (ADos)

Work effectively as an individual or team member during AI product ideation activities.

G. Prerequisite Theory:

- Introduction to AI products
- Difference between AI tool and AI product
- Basic understanding of problem-solving techniques
- Awareness of digital platforms and AI applications

H. Resources/Equipment Required

Sr. No.	Instrument/Equipment /Components/Trainer kit	Specification	Quantity
<u>1</u>	Laptop/Desktop with Internet Connection	Any processor above i3 and any operating system	1
<u>2</u>	AI Idea Generation Tool (ChatGPT or similar)	Web-based AI platform	1

I. Safety and necessary Precautions followed

- a. Keep all computers clean and free from dust.
- b. Ensure proper electrical grounding and safe power connections.
- c. Use antivirus software for system protection.
- d. Follow ethical guidelines while generating AI-based ideas.
- e. Avoid using unauthorized or inappropriate online resources.

J. Procedure to be followed/Source code:

- a. Select a real-world problem related to education, healthcare, transportation, agriculture, or social media.
- b. Write a clear problem statement.
- c. Identify target users and their needs.
- d. Define the AI product idea that addresses the problem.
- e. List at least three core features of the proposed AI product.
- f. Prepare a short report describing the problem, users, and features.

K. Observations and Calculations/Input-Output:

L. Conclusion

M. Practical related Quiz.

- What is an AI product?
- How is an AI product different from an AI tool?
- What is a problem statement?
- Why is identifying target users important in product design?
- What are core features in an AI product?

Practical No.2: Draw conceptual AI system architecture showing Data, Model, Interface, and Feedback Loop.

A. Objective: The objective of this practical is to make students understand the process of identifying a real-world problem, defining an AI product idea, identifying target users, and specifying minimum core features for an AI-based solution.

B. Expected Program Outcomes (POs):

PO1, PO3, PO5

C. Expected Skills to be developed based on competency:

- System analysis skill
- Architecture diagram preparation skill
- Technical documentation skill

D. Expected Course Outcomes (Cos)

CO1: Describe the fundamental concepts of AI products and AI models.

E. Practical Outcome (PRo)

Draw conceptual AI system architecture showing Data, Model, Interface, and Feedback Loop.

F. Expected Affective domain Outcome (ADos)

Demonstrate systematic thinking while representing AI system components.

G. Prerequisite Theory:

- Components of AI systems: Data, Model, Interface, Feedback Loop
- Basic AI system architecture
- Human-in-the-loop systems

H. Resources/Equipment Required

Sr. No.	Instrument/Equipment /Components/Trainer kit	Specification	Quantity
1	Laptop/Desktop with Internet Connection	Any processor above i3 and any operating system	1
2	AI Idea Generation Tool (ChatGPT or similar)	Web-based AI platform	1

I. Safety and necessary Precautions followed

- a. Use only authorized software tools.
- b. Save work periodically to avoid data loss.
- c. Maintain proper computer usage practices.

J. Procedure to be followed/Source code:

- a. Select the AI product idea from Practical No.1.
- b. Identify the data source(s) required by the AI product.
- c. Identify the AI model component conceptually.
- d. Identify the user interface through which users interact with the system.
- e. Add a feedback loop showing how user feedback improves the system.
- f. Draw the complete conceptual architecture diagram using a suitable tool.
- g. Label all components clearly.

K. Observations and Calculations/Input-Output:

L. Conclusion

M. Practical related Quiz.

- What are the main components of an AI system?
- Why is data important in AI systems?
- What is the role of the interface in an AI product?
- What is a feedback loop?
- What is a human-in-the-loop system?

Practical No. 3: Identify and describe Data components, classify data types, and identify risks.

A. Objective:

The objective of this practical is to make students understand the role of data in AI systems, classify different types of data, and identify potential risks associated with data usage.

B. Expected Program Outcomes (POs)

PO2, PO4, PO6

C. Expected Skills to be developed based on competency:

- Data identification and classification skill
- Risk analysis skill
- Analytical reporting skill

D. Expected Course Outcomes (Cos)

CO1: Describe the fundamental concepts of AI products and AI models.

CO5: Explain data privacy concepts, governance principles, and responsible AI practices.

E. Practical Outcome (PPro)

Identify and describe data components, classify data types, and identify risks.

F. Expected Affective domain Outcome (ADos)

Develop awareness of responsible data handling and privacy considerations.

G. Prerequisite Theory:

- Data components in AI systems
- Types of AI models and data usage
- Data privacy concepts
- Personal vs. sensitive data

H. Resources/Equipment Required

Sr. No.	Instrument/Equipment /Components/Trainer kit	Specification	Quantity
1	Laptop/Desktop with Internet Connection	Any processor above i3 and any operating system	1
2	Spreadsheet / Documentation Tool	MS Excel / Google Sheets / MS Word	1

I. Safety and necessary Precautions followed:

- Do not use real personal or sensitive data for analysis.
- Use only sample or hypothetical datasets.
- Store files securely and avoid unauthorized sharing.

J. Procedure to be followed/Source code:

- Select the AI product idea from Practical No.1.
- List the data required by the AI product.
- Classify the data into categories such as text, image, audio, numerical, or user profile data.
- Identify whether the data is personal, sensitive, or non-personal.
- Identify possible risks such as privacy leakage, unauthorized access, bias, or incorrect data collection.
- Prepare a table summarizing data components, data types, and associated risks.

K. Observations and Calculations/Input-Output:

L. Conclusion

M. Practical related Quiz.

- What is personal data?
- What is sensitive data?
- Name any three types of data used in AI systems.
- What are common risks associated with AI data?
- Why is data classification important?

Practical No. 4: Develop User Persona, Empathy Map, and Customer Journey Map**A. Objective:**

The objective of this practical is to make students understand design thinking techniques for analyzing user needs and designing user-centric AI solutions.

B. Expected Program Outcomes (POs)

PO2, PO3, PO8

C. Expected Skills to be developed based on competency:

- User research and analysis skill
- Design thinking skill
- Customer journey mapping skill
- Collaboration and communication skill

D. Expected Course Outcomes (Cos)

CO2: Use design thinking principles to develop user-centric AI solutions.

E. Practical Outcome (PPro)

Develop User Persona, Empathy Map, and Customer Journey Map

F. Expected Affective domain Outcome (ADos)

Demonstrate empathy and collaborative thinking while analyzing user needs.

G. Prerequisite Theory:

- Design Thinking process
- Empathy Mapping
- User Persona Development
- Customer Journey Mapping

H. Resources/Equipment Required

Sr. No.	Instrument/Equipment /Components/Trainer kit	Specification	Quantity
1	Laptop/Desktop with Internet Connection	Any processor above i3 and any operating system	1

2	Collaboration / Design Tool	Figma / FigJam / Miro / Canva	<u>1</u>
---	-----------------------------	-------------------------------	----------

I. Safety and necessary Precautions followed:

- a. Use collaborative tools responsibly.
- b. Do not include real personal information in personas.
- c. Maintain respectful communication during group activities.

J. Procedure to be followed/Source code:

- a. Select the target users identified in Practical No.1.
- b. Create a User Persona including age, occupation, goals, challenges, and technology usage.
- c. Prepare an Empathy Map covering what the user says, thinks, does, and feels.
- d. Identify the stages of interaction with the proposed AI product.
- e. Draw a Customer Journey Map showing user actions, pain points, and opportunities for improvement.
- f. Summarize how the AI product can improve the user experience.

K. Observations and Calculations/Input-Output:

L. Conclusion

M. Practical related Quiz.

- What is a User Persona?
- What is the purpose of an Empathy Map?
- What is a Customer Journey Map?
- Why is empathy important in AI product design?
- What are pain points in a customer journey?

Practical No. 5: Design AI Interaction Flow and Basic UI Wireframe.

A. Objective:

The objective of this practical is to make students understand AI interaction design and create a basic UI wireframe for an AI product interface.

B. Expected Program Outcomes (POs)

PO3, PO5, PO9

C. Expected Skills to be developed based on competency:

- UI/UX design skill
- Interaction flow design skill
- Wireframe preparation skill
- Visual communication skill

D. Expected Course Outcomes (Cos)

CO2: Use design thinking principles to develop user-centric AI solutions.

E. Practical Outcome (PRo)

Design AI interaction flow and basic UI wireframe.

F. Expected Affective domain Outcome (ADos)

Develop attention to usability and user experience while designing AI interfaces.

G. Prerequisite Theory:

- UX principles for AI systems
- Human-AI interaction design
- Explainable AI (conceptual overview)
- Basic UI mock-up design

H. Resources/Equipment Required

Sr. No.	Instrument/Equipment /Components/Trainer kit	Specification	Quantity
1	Laptop/Desktop with Internet Connection	Any processor above i3 and any operating system	1
2	UI Design Tool	Figma / Canva / Framer	1

I. Safety and necessary Precautions followed:

- a. Use licensed or authorized design tools.
- b. Save design files regularly.
- c. Avoid using copyrighted UI assets without permission.

J. Procedure to be followed/Source code:

- a. Select the AI product idea from Practical No.1.
- b. Identify the main user tasks to be performed using the AI product.
- c. Draw an interaction flow showing the sequence of user actions and AI responses.
- d. Identify the main screens required for the application.
- e. Create a low-fidelity wireframe for at least two screens (e.g., Home screen and AI Response screen).
- f. Add labels for buttons, input fields, and AI output areas.
- g. Prepare a brief explanation of the interaction flow and wireframe design decisions.

K. Observations and Calculations/Input-Output:

L. Conclusion

M. Practical related Quiz.

- What is an interaction flow?
- What is a wireframe?
- Why is UX important in AI systems?
- What is the difference between a low-fidelity and high-fidelity design?
- What is human-AI interaction design?

Practical No. 6: Define Minimum Viable Product (MVP) Features and Prepare Feature Prioritization Matrix

A. Objective:

The objective of this practical is to make students understand the concept of Minimum Viable Product (MVP) and apply feature prioritization techniques for AI product planning.

B. Expected Program Outcomes (POs)

PO3, PO5, PO10

C. Expected Skills to be developed based on competency:

- Product planning skill
- Feature analysis and prioritization skill
- Decision-making skill
- Technical documentation skill

D. Expected Course Outcomes (Cos)

CO3: Utilize concepts of AI product lifecycle, feature prioritization, and business models to outline AI product strategies.

E. Practical Outcome (PRo)

Define Minimum Viable Product (MVP) features and prepare feature prioritization matrix.

F. Expected Affective domain Outcome (ADos)

Develop analytical and management-oriented thinking while planning AI product features.

G. Prerequisite Theory:

- Product lifecycle management
- Minimum Viable Product (MVP)
- Feature prioritization
- Cost awareness in AI products
- Basic AI evaluation methods

H. Resources/Equipment Required

Sr. No.	Instrument/Equipment /Components/Trainer kit	Specification	Quantity
1	Laptop/Desktop with Internet Connection	Any processor above i3 and any operating system	1
2	Spreadsheet / Collaboration Tool	MS Excel / Google Sheets / Notion	

I. Safety and necessary Precautions followed:

- Use authorized productivity and collaboration tools.
- Maintain version control of planning documents.
- Avoid sharing project files without permission.

J. Procedure to be followed/Source code:

- Select the AI product idea from Practical No.1.
- List all possible features of the proposed product.
- Identify the minimum features required to deliver basic value to users.
- Categorize features as **Must Have**, **Should Have**, **Could Have**, or **Future Feature**.
- Prepare a feature prioritization matrix considering user value, implementation effort, and business impact.
- Define the final MVP feature set.
- Write a short justification for including or excluding each feature from the MVP.

K. Observations and Calculations/Input-Output:

L. Conclusion

M. Practical related Quiz.

- What is an MVP?
- Why is feature prioritization important?
- What is the difference between a core feature and a future feature?
- What factors are considered in a prioritization matrix?
- How does an MVP help reduce product development risk?

Practical No. 7: Develop Business Model Canvas and Identify AI Monetization Strategy

A. Objective:

The objective of this practical is to make students understand the Business Model Canvas (BMC) and identify suitable AI monetization strategies for an AI product.

B. Expected Program Outcomes (POs)

PO3, PO5, PO10

C. Expected Skills to be developed based on competency:

- Business analysis skill
- Product planning skill
- Decision-making skill
- Documentation and presentation skill

D. Expected Course Outcomes (Cos)

CO3: Utilize concepts of AI product lifecycle, feature prioritization, and business models to outline AI product strategies.

E. Practical Outcome (PPro)

Develop Business Model Canvas and identify AI monetization strategy.

F. Expected Affective domain Outcome (ADos)

Develop analytical thinking and teamwork while designing AI product business strategies.

G. Prerequisite Theory:

- Business Model Canvas (BMC)
- AI Product Lifecycle
- AI Monetization Models
- SaaS Business Model
- API-based Business Model
- Subscription-based Business Model
- Value Proposition

H. Resources/Equipment Required

Sr. No.	Instrument/Equipment /Components/Trainer kit	Specification	Quantity
1	Laptop/Desktop with Internet Connection	Any processor above i3 and any operating system	1
2	Business Model Canvas Template (Miro/FigJam/Canva/Notion)	Online or Offline	1

I. Safety and necessary Precautions followed:

- a. Use only authorized online collaboration tools.
- b. Save project files periodically.
- c. Keep business information confidential.
- d. Use reliable sources for market research.

J. Procedure to be followed/Source code:

- a. Select the AI product developed in previous practical.
- b. Identify the customer segments.
- c. Define the value proposition.
- d. Identify customer relationships.
- e. Define channels for product delivery.
- f. Identify key resources.
- g. Identify key activities.
- h. Identify key partners.
- i. Estimate cost structure.
- j. Identify possible revenue streams.
- k. Select an appropriate AI monetization model such as SaaS, Subscription or API-based model.
- l. Prepare the complete Business Model Canvas.
- m. Present the Business Model Canvas to the instructor.

K. Observations and Calculations/Input-Output:

L. Conclusion

M. Practical related Quiz.

- What is Business Model Canvas?
- Name the nine blocks of Business Model Canvas.
- What is SaaS?
- What is API monetization?
- What are different revenue models for AI products?
- Why is Value Proposition important?
- What is Customer Segment?
- What is Cost Structure?

O. Assessment-Rubrics

Criteria	Weightage	Good (5–4)	Satisfactory (3–2)	Need Improvement (1–0)	Marks
C1: Problem Understanding & Analysis	20%	Clearly understands the problem and user requirements.	Partial understanding with minor gaps.	Limited understanding of the problem.	
C2: Application of Knowledge & Skills	20%	Correctly applies relevant concepts, methods, and tools.	Partially applies concepts with minor errors.	Limited or incorrect application of concepts.	
C3: Quality & Creativity of Output	20%	Output is complete, accurate, creative, and meets all requirements.	Output is partially complete or moderately accurate.	Output is incomplete or does not meet requirements.	
C4: Interpretation & Justification	20%	Clearly explains results and justifies decisions.	Provides partial explanation and justification.	Explanation is unclear or incomplete.	
C5: Documentation & Presentation	20%	Well-organized, neat, and properly documented.	Adequately documented with minor issues.	Poorly organized or incomplete documentation.

Practical No. 8: Prepare AI Integration Plan Including API Usage, Cost Awareness, and Security

A. Objective:

The objective of this practical is to make students understand AI integration concepts, API usage, cost awareness and security considerations while integrating AI services into digital products.

B. Expected Program Outcomes (POs)

PO2, PO5, PO7

C. Expected Skills to be developed based on competency:

- API planning skill
- AI integration skill
- Security awareness
- Technical documentation skill

D. Expected Course Outcomes (Cos)

CO3: Utilize concepts of AI product lifecycle, feature prioritization, and business models to outline AI product strategies.

E. Practical Outcome (PRo)

Prepare AI integration plan including API usage, cost awareness and security.

F. Expected Affective domain Outcome (ADos)

Develop responsibility towards secure and ethical AI integration.

G. Prerequisite Theory:

- AI APIs, OpenAI API (Concept Only) , API Key
- Token Concept, Cost Awareness
- API Security, Secure Authentication
- Input Validation, Output Moderation

H. Resources/Equipment Required

Sr. No.	Instrument/Equipment /Components/Trainer kit	Specification	Quantity
1	Laptop/Desktop with Internet Connection	Any processor above i3 and any operating system	1
2	OpenAI Playground / Similar AI Platform	Web based	1

I. Safety and necessary Precautions followed:

- a. Never share API keys publicly.
- b. Use strong passwords.
- c. Use secure internet connection.
- d. Follow responsible AI usage practices.
- e. Protect confidential data.

J. Procedure to be followed/Source code:

- a. Select the AI product developed in previous practicals.
- b. Identify where AI functionality will be integrated.
- c. List the required API inputs.
- d. Identify expected API outputs.
- e. Explain the API request and response flow.
- f. Estimate token usage and approximate API cost.
- g. Identify possible security risks.
- h. Define secure API key handling methods.
- i. Add input validation and output moderation steps.
- j. Prepare a complete AI Integration Plan document.
- k. Present the integration plan.

K. Observations and Calculations/Input-Output:

L. Conclusion

M. Practical related Quiz.

- What is an API?
- What is an API key?
- Why should API keys remain secret?
- What is token usage?
- Why is cost awareness important?
- What is input validation?
- What is output moderation?
- What are the security risks during AI integration?

Date:

Practical No. 9: Design AI-Based Social Media Campaign and Generate Promotional Content.

A. Objective

The objective of this practical is to make students understand how Artificial Intelligence can be used for creating social media campaigns, generating promotional content, and improving digital customer engagement.

B. Expected Program Outcomes (POs)

PO3, PO5, PO9

C. Expected Skills to be developed based on competency:

- AI content creation skill
- Digital marketing skill
- Creative thinking skill
- Communication and presentation skill

D. Expected Course Outcomes (Cos)

CO4: Discuss the applications of AI in social media, content creation, and recommendation systems along with associated risks.

E. Practical Outcome (PPro)

Design AI-based social media campaign and generate promotional content.

F. Expected Affective domain Outcome (ADos)

Develop creativity and responsible use of AI while designing promotional content.

G. Prerequisite Theory:

- AI in Social Media
- AI Content Generation
- AI Recommendation Systems
- AI Chatbots
- AI-driven Advertisement
- AI Avatars and Virtual Influencers
- Canva AI / ChatGPT / Gamma AI

H. Resources/Equipment Required

Sr. No.	Instrument/Equipment /Components/Trainer kit	Specification	Quantity
1	Laptop / Desktop with Internet Connection	Any processor above i3 and any operating system	1
2	AI Content Generation Tool (e.g., ChatGPT, Google Gemini, Microsoft Copilot), Graphic Design Tool (e.g., Canva, Adobe Express, Microsoft Designer)	Web based	1

I. Safety and necessary Precautions followed:

- a. Avoid generating misleading or false promotional content.
- b. Respect copyright while using AI-generated images.
- c. Verify AI-generated information before publishing.
- d. Use AI responsibly and ethically.
- e. Do not upload confidential information to AI platforms.

J. Procedure to be followed/Source code:

- a. Select the AI product developed in previous practicals.
- b. Identify the target audience.
- c. Select suitable social media platforms (Instagram, LinkedIn, Facebook, X, etc.).
- d. Generate promotional text using AI tools.
- e. Design promotional poster/banner using Canva AI or similar tools.
- f. Generate product tagline and hashtags.
- g. Prepare one promotional email and one social media post.
- h. Design a simple campaign schedule.
- i. Present the campaign to the instructor.

K. Observations and Calculations/Input-Output:

L. Conclusion

M. Practical related Quiz.

- What is AI content generation?
- Name two AI tools used for content creation.
- What is AI-driven advertisement?
- What is a recommendation system?
- What is the purpose of hashtags?
- Why should AI-generated content be verified?
- What is a virtual influencer?
- How can AI improve digital marketing?

Practical No. 10: Develop Prototype Using No-Code AI Tools and Prepare Demo Video (2–3 Minutes)

A. Objective

The objective of this practical is to enable students to develop a prototype of an AI product using no-code AI tools and demonstrate its functionality through a short video presentation.

B. Expected Program Outcomes (POs)

PO3, PO5, PO9, PO10

C. Expected Skills to be developed based on competency:

- Prototype development skill
- UI/UX design skill
- Video presentation skill
- Project demonstration skill

D. Expected Course Outcomes (Cos)

CO4: Discuss the applications of AI in social media, content creation, and recommendation systems along with associated risks.

E. Practical Outcome (PPro)

Develop prototype using no-code AI tools and prepare a 2–3 minute demo video.

F. Expected Affective domain Outcome (ADos)

Develop confidence and teamwork while demonstrating AI product prototypes.

G. Prerequisite Theory:

- No-code AI tools
- AI Product Prototype
- UI Mock-up Design
- Figma ,Canva
- Google Teachable Machine
- Demo Video Preparation
- User Interface Design

H. Resources/Equipment Required

Sr. No.	Instrument/Equipment /Components/Trainer kit	Specification	Quantity
1	Laptop / Desktop with Internet Connection	Any processor above i3 and any operating system	1
2	No-Code Tool (Figma, Canva, Glide, AppSheet, Bravo Studio, OBS Studio, Loom, Canva Video Editor, Google Teachable Machine etc.)	No-Code AI Platform, Screen Recording Tool, Online UI Design Tool	1

I. Safety and necessary Precautions followed:

- a. Use licensed or free educational software.
- b. Store project files safely.
- c. Avoid using copyrighted media without permission.
- d. Verify prototype functionality before recording.
- e. Protect confidential project information.

J. Procedure to be followed/Source code:

- a. Select the AI product developed in previous practicals.
- b. Design UI screens using Figma or Canva.
- c. Develop a clickable prototype.
- d. Integrate AI workflow conceptually.
- e. Demonstrate major product features.
- f. Record a 2–3 minute demonstration video.
- g. Explain product objectives, users and functionality.
- h. Save prototype and video files.
- i. Present the prototype before the instructor.

K. Observations and Calculations/Input-Output:

L. Conclusion

M. Practical related Quiz.

- What is a prototype?
- What is a no-code AI tool?
- What is Figma used for?
- What is Google Teachable Machine?
- Why is UI design important?
- What should be included in a demo video?
- What is a clickable prototype?
- What are the benefits of no-code development?

Practical No. 11: Draft Data Protection Plan and AI Ethical Usage Policy

A. Objective

The objective of this practical is to make students understand data privacy, AI ethics, and responsible AI practices by preparing a Data Protection Plan and an AI Ethical Usage Policy for an AI product.

B. Expected Program Outcomes (POs)

PO6, PO7, PO9

C. Expected Skills to be developed based on competency:

- Data privacy analysis skill
- Ethical decision-making skill
- Policy drafting skill
- Technical documentation skill

D. Expected Course Outcomes (Cos)

CO5: Explain data privacy concepts, governance principles, and responsible AI practices.

E. Practical Outcome (PRo)

Draft Data Protection Plan and AI Ethical Usage Policy.

F. Expected Affective domain Outcome (ADos)

Develop responsibility and ethical awareness while designing AI-enabled systems.

G. Prerequisite Theory:

- Data Privacy Concepts
- Personal Data and Sensitive Data
- Data Lifecycle in AI Systems
- Data Minimization Principle
- Data Anonymization
- Transparency and User Consent
- Responsible AI Principles
- AI Governance
- Indian Data Protection Law (Basic Overview)

H. Resources/Equipment Required

Sr. No.	Instrument/Equipment /Components/Trainer kit	Specification	Quantity
1	Laptop / Desktop with Internet Connection	Any processor above i3 and any operating system	1
2	MS Word / Google Docs	Documentation Tool	1

I. Safety and necessary Precautions followed:

- Do not use real personal or confidential data.
- Follow ethical AI practices while preparing documents.
- Respect privacy laws and institutional guidelines.
- Store documents securely.
- Use authentic reference materials.

K .Procedure to be followed/Source code:

- Select the AI product developed in previous practicals.
- Identify the types of user data collected.
- Classify data as personal, sensitive, or non-personal.
- Prepare the Data Lifecycle for the product.
- Identify privacy risks.
- Apply the Data Minimization Principle.
- Define user consent requirements.
- Prepare a Data Protection Plan.
- Draft an AI Ethical Usage Policy including fairness, transparency, accountability, privacy, and responsible AI practices.
- Present the policy document to the instructor.

L. Observations and Calculations/Input-Output:

M. Conclusion

N. Practical related Quiz.

- What is personal data?
- What is sensitive personal data?
- What is data minimization?
- Why is user consent important?
- What is data anonymization?
- What are Responsible AI principles?
- What is AI Governance?
- Why is AI ethics important?

Practical No. 12: Perform AI Risk Assessment and Design Mitigation Strategy

A. Objective:

The objective of this practical is to make students identify common AI security threats, evaluate associated risks, and design suitable mitigation strategies for AI-based systems.

B. Expected Program Outcomes (POs)

PO2, PO4, PO5, PO6

C. Expected Skills to be developed based on competency:

- Risk identification skill
- Security analysis skill
- Problem-solving skill
- Technical reporting skill

D. Expected Course Outcomes (Cos)

CO6: Apply knowledge of AI threats to identify appropriate mitigation strategies in basic scenarios.

E. Practical Outcome (PPro)

Perform AI risk assessment and design mitigation strategy.

F. Expected Affective domain Outcome (ADos)

Develop responsibility towards secure, safe, and trustworthy AI system development.

G. Prerequisite Theory:

- AI Threats ,Data Breaches
- Prompt Injection Attacks, Model Misuse
- Bias and Discrimination
- AI-generated Phishing , Deepfakes and Misinformation
- Input Validation , Output Moderation
- Secure API Key Handling , Access Control
- Logging and Monitoring ,Human-in-the-loop Review , AI Risk Assessment Checklist

H. Resources/Equipment Required

Sr. No.	Instrument/Equipment /Components/Trainer kit	Specification	Quantity
1	Laptop/Desktop with Internet Connection	Any processor above i3 and any operating system	1
2	MS Word / Google Docs	Documentation Tool	1

I. Safety and necessary Precautions followed:

- Use only sample datasets and case studies.
- Do not expose confidential credentials.
- Follow responsible AI security practices.
- Use strong passwords and secure storage.
- Maintain academic integrity while preparing reports.

J. Procedure to be followed/Source code:

- Select the AI product developed in previous practicals.
- Identify possible AI security threats.
- Categorize threats according to severity.
- Identify vulnerable components of the AI system.
- Prepare a simple AI Risk Assessment Checklist.
- Suggest mitigation strategies for each identified threat.
- Include input validation and output moderation mechanisms.
- Recommend secure API key management practices.
- Suggest human-in-the-loop review wherever applicable.
- Prepare the final AI Risk Assessment Report.
- Present the findings before the instructor.

K. Observations and Calculations/Input-Output:

L. Conclusion

M. Practical related Quiz.

- What is an AI threat?
- What is prompt injection?
- What is model misuse?
- What is AI-generated phishing?
- What is output moderation?
- Why is secure API key handling important?
- What is Human-in-the-loop Review?
- Why is AI risk assessment necessary?
